

```

class Test {
    public void m() {
        if (x > y)
            return;
        else
            return;
        while (!c)
            return;
    }
}

```

```

<program>
  <class 'Test'>
    <dynamic method 'm'>
      <if>
        <binary expr '>'>
          <ident 'x'>
          <ident 'y'>
        <return>
        <return>
      <if>
        <unary expr '!'>
          <ident 'c'>
        <return>

```
