

```
class c {  
    public static void main(String[] args) {}  
  
    public int m() {  
        int[] array = new int[2];  
        return array[0];  
    }  
}
```

```
<program>  
  <class 'c'>  
    <static method 'main'>  
      <param 'String[]' 'args'>  
    <dynamic method 'm'>  
      <local var 'int[]' 'array'>  
        <new array 'int'>  
          <value '2'>  
      <return>  
        <array access>  
          <value '0'>  
          <ident 'array'>
```
